

Basic Facts About Low-income Children, 2008

Children Aged 12–17

Vanessa R. Wight | Michelle Chau

November 2009

Children represent 25 percent of the population. Yet, 41 percent of all children and 36 percent of adolescents ages 12 through 17 live in low-income families. In addition, nearly 20 percent of all children and 16 percent of adolescents live in poor families. Winding up in a low-income or poor family does not happen by chance. There are significant factors related to children's experiences with economic insecurity, such as race/ethnicity and parents' education and employment. This fact sheet describes the demographic, socio-economic, and geographic characteristics of adolescents and their parents – highlighting the important factors that appear to distinguish low-income and poor children in this age group from their less disadvantaged counterparts.

Columbia University

How many adolescent children ages 12 through 17 in the United States live in low-income families?

There are over 24 million adolescents ages 12 through 17 in the United States.

- ◆ 36 percent – 9.1 million – live in low-income families.
- ◆ 16 percent – four million – live in poor families.

What is the federal poverty level (FPL) in 2009?¹

- ◆ \$22,050 for a family of four.
- ◆ \$18,310 for a family of three.
- ◆ \$14,570 for a family of two.

Is a poverty-level income enough to support a family?²

Research suggests that, on average, families need an income equal to about two times the federal poverty level to meet their most basic needs.² Families with incomes below this level are referred to as low income:

- ◆ \$44,100 for a family of four.
- ◆ \$36,620 for a family of three.
- ◆ \$29,140 for a family of two.

These dollar amounts approximate the average minimum income families need to make ends meet, but actual expenses vary greatly by locality. For a family of four, the cost of basic family expenses is about \$37,000 per year in El Paso, TX, \$42,000 in Spokane, WA, \$45,000 in Detroit, MI, and \$49,000 in Buffalo, NY.³

Has the percentage of adolescents living in low-income and poor families changed over time?

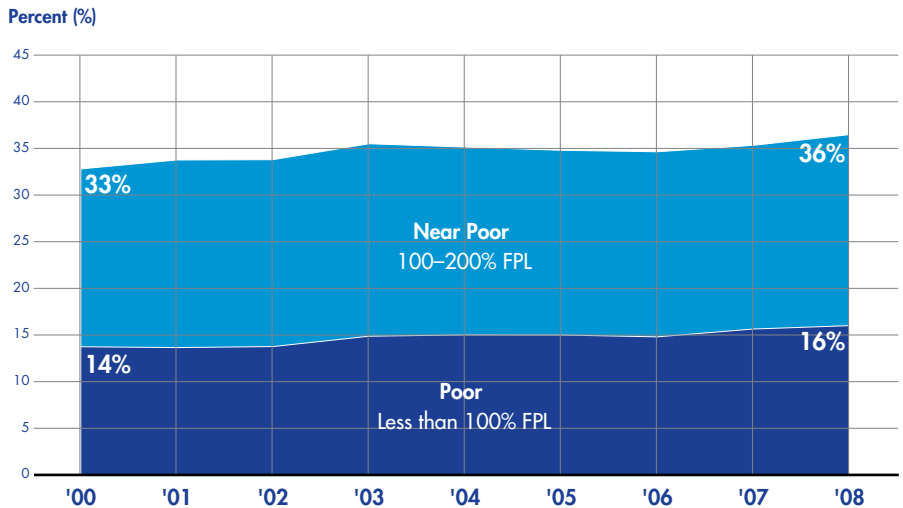

The percentage of adolescent children living in low-income families (both poor and near poor) has been *on the rise* – increasing from 33 percent in 2000 to 36 percent in 2008. During this time period, the overall number of adolescent children ages 12

through 17 increased by four percent while the number who were low-income and poor increased by 16 percent and 21 percent, respectively. This upward trend in low-income and poor children follows on the heels of a decade of decline in the 1990s.

Percentage change of adolescents living in low-income and poor families, 2000–2008

	2000	2008	Percent change
Low income	7,802,965	9,054,192	16%
Poor	3,267,893	3,969,961	21%

Adolescents living in low-income and poor families, 2000–2008

How do adolescents compare to the rest of the population?

The percentage of adolescents in low-income families surpasses that of adults. In addition, children ages 12 through 17 are over one and a half times more likely than adults aged 65 and older to live in poor families.

Percentage low-income and poor by age, 2008

Does the percentage of children in low-income families vary by children's age?

The overall percentages of children living in low-income and poor families masks important variation by age. Adolescents are less likely to live in low-income families than younger children. Although they represent 34 percent of the population under age 18, 36 percent – 9.1 million – live in low-income families and 16 percent – four million – live in poor families.

- ◆ 43 percent of children under age 12 – 20.8 million – live in low-income families.
- ◆ 36 percent of children ages 12 through 17 years – 9.1 million – live in low-income families.

Children living in low-income and poor families by age, 2008

Does the percentage of adolescents in low-income families vary by race/ethnicity?⁴

Although black, American Indian, and Hispanic adolescents are disproportionately low income, whites comprise the largest group of low-income adolescents.

- ◆ 24 percent of white adolescents – 3.6 million – live in low-income families.
- ◆ 56 percent of black adolescents – 2.1 million – live in low-income families.
- ◆ 32 percent of Asian adolescents – 0.3 million – live in low-income families.
- ◆ 54 percent of American Indian adolescents – 0.1 million – live in low-income families.
- ◆ 36 percent of adolescents of some other race – 0.2 million – live in low-income families.
- ◆ 58 percent of Hispanic adolescents – 2.8 million – live in low-income families.

Percentage distribution of all adolescents and adolescents living in low-income and poor families by race/ethnicity, 2008

Percentage of adolescents in low-income and poor families by race/ethnicity, 2008

Does the percentage of adolescents in low-income families vary by parents' country of birth?⁵

- ◆ 56 percent of adolescents of immigrant parents – 2.3 million – live in low-income families.
- ◆ 33 percent of adolescents of native-born parents – 6.5 million – live in low-income families.

What are the family characteristics of low-income adolescents?

Parents' Education⁶

Higher levels of parents' education decrease the likelihood that a child will live in a low-income or poor family. Yet 41 percent of low-income adolescents and one-third of poor adolescents have a parent with at least some college education.

- ◆ 81 percent of adolescents with parents who have less than a high school degree – 2.2 million – live in low-income families.
- ◆ 52 percent of adolescents with parents who have no more than a high school degree – 3.2 million – live in low-income families.
- ◆ 23 percent of adolescents with at least one parent who has some college or more education – 3.7 million – live in low-income families.

Parents' Employment⁷

Although adolescents with a full-time, year-round employed parent comprise more than half of the low-income population, they are less likely to be living in a low-income family compared to children with parents who work part-time/part-year or who are not employed.

- ◆ 25 percent of adolescents with at least one parent who works full-time, year-round – 4.9 million – live in low-income families.
- ◆ 68 percent of adolescents with at least one parent who works part-time or part-year – 2.3

Adolescents living in low-income and poor families by parents' education, 2008

Adolescents living in low-income and poor families by parents' employment and education, 2008

million – live in low-income families.

- ◆ 87 percent of adolescents with no employed parents – 1.9 million – live in low-income families.

Family Structure

Forty-six percent of adolescents in low-income families – 4.1 mil-

lion – and 35 percent of adolescents in poor families – 1.4 million – live with married parents.

- ◆ 25 percent of adolescents with married parents – 4.1 million – live in low-income families.
- ◆ 62 percent of adolescents with single parents – 4.9 million – live in low-income families.

Does the percentage of adolescents in low-income families vary by where they live?

Region

- ◆ 40 percent of adolescents in the South – 3.6 million – live in low-income families.
- ◆ 37 percent of adolescents in the West – 2.2 million – live in low-income families.
- ◆ 33 percent of adolescents in the Northeast – 1.4 million – live in low-income families.
- ◆ 33 percent of adolescents in the Midwest – 1.8 million – live in low-income families.

Type of Area

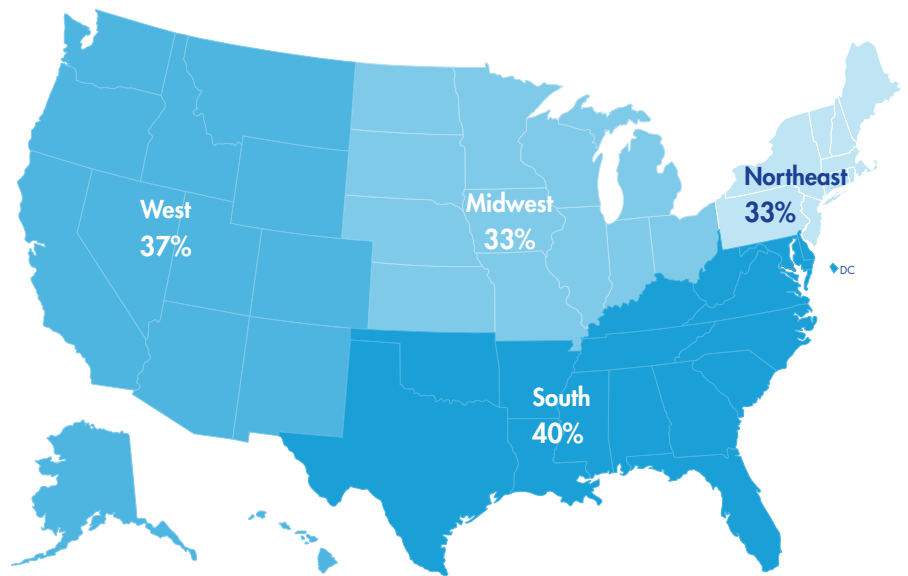

- ◆ 48 percent of adolescents in urban areas – three million – live in low-income families.
- ◆ 29 percent of adolescents in suburban areas – 3.2 million – live in low-income families.
- ◆ 41 percent of adolescents in rural areas – 1.6 million – live in low-income families.

Residential Instability and Home Ownership

Research suggests that stable housing is important for healthy child development.⁸ Yet, adolescents living in low-income families were over two times more likely to have moved in the past year and nearly two times *less* likely to live in families that own a home compared with adolescents living in above low-income families.

- ◆ 16 percent of adolescents in low-income families – 1.5 million – moved in the last year.

Percentage of adolescents living in low-income families by region, 2008

- ◆ 7 percent of adolescents in above low-income families – 1.2 million – moved in the last year.
- ◆ 48 percent of adolescents in low-income families – 4.3 million – live with a family that owns a home.
- ◆ 85 percent of adolescents in above low-income families – 13.4 million – live with a family that owns a home.

Percentage of adolescents living in low-income and above low-income families by residential instability and home ownership, 2008

Are adolescents in low-income families covered by health insurance?⁹

Consistent with research suggesting older children in general are particularly at risk of being uninsured, low-income and poor adolescents are more likely to be without health insurance coverage than their younger counterparts with approximately 21 percent in low-income families and 22 percent in poor families reporting no insurance coverage of any kind.¹⁰ Although more than one-third of low-income adolescents are covered by private health insurance, Medicaid is the most likely provider with 41 percent of low-income children and more than one-half of poor children (54 percent) covered by this public insurance program.

- ◆ 21 percent of adolescents living in low-income families – 1.9 million – are uninsured.
- ◆ 36 percent of adolescents living in low-income families – 3.2 million – are covered by private insurance.
- ◆ 41 percent of adolescents living in low-income families – 3.7 million – are covered by Medicaid.
- ◆ 19 percent of adolescents living in low-income families – 1.7 million – are covered by their state's Children Health Insurance Program (CHIP).

Endnotes

This fact sheet is part of the National Center for Children in Poverty's demographic fact sheet series and is updated annually. Unless otherwise noted, analysis of the U.S. Current Population Survey, Annual Social and Economic Supplement, March 2009, was conducted by Michelle Chau and Vanessa R. Wight of NCCP. Yumiko Aratani provided feedback that contributed to the analysis. Estimates include children living in households with at least one parent and most children living apart from both parents (for example, children being raised by grandparents). Children living independently, living with a spouse, or in group quarters are excluded from these data. Children ages 14 and under living with only unrelated adults were not included because data on their income status were not available. Among children who do not live with at least one parent, parental characteristics are those of the householder and/or the householder's spouse. Special thanks to Shannon Stagman, Morris Ardoin, Amy Palmisano, and Telly Valdellon.

1. These numbers are from the federal poverty guidelines issued annually by the U.S. Department of Health and Human Services. The demographic findings in this fact sheet were calculated using more complex versions of the federal poverty measure – the thresholds issued by the U.S. Census Bureau. For more information on measuring poverty, see NCCP's state profiles and the U.S. Department of Health and Human Services.
2. Cauthen, Nancy K.; Fass, Sarah. 2008. *Measuring Income and Poverty in the United States*. New York, NY: National Center for Children in Poverty, Columbia University, Mailman School of Public Health.
3. These figures were derived from NCCP's Basic Needs Budget Calculator.
4. In the most recent CPS, parents could report children's race as one or more of the following: "White," "Black," "American Indian or Alaskan Native," or "Asian and/or Hawaiian/Pacific Islander." In a separate question, parents could report whether their children were of Hispanic origin. For the data reported, children whose parent reported their race as White, Black, American Indian or Alaskan Native, or Asian and/or Hawaiian/Pacific Islander and their ethnicity as non-Hispanic are assigned their respective race. Children who were reported to be of more than one race were assigned as Other. Children whose parent identified them as Hispanic were categorized as Hispanic, regardless of their reported race.
5. Low-income infants and toddlers living in households with one immigrant parent and one native-born parent (approximately 0.3 million) are not included in these estimates.
6. Parent's education is the education level of the most highly educated parent living in the household. Parents can either have no high school degree; a high school degree, but no college; or some college or more.
7. Parent's employment is the employment level of the parent in the household who maintained the highest level of employment in the previous year. Parents can either have no employment in the previous year, part-year or part-time employment, or full-time, year-round employment. Part-year or part-time employment is defined as either working less than 50 weeks in the previous year or less than 35 hours per week. Full-time, year-round employment is defined as working at least 50 weeks in the previous year and 35 hours or more per week for more than half the year.
