

Basic Facts About Low-income Children, 2008

Children Under Age 18

Vanessa R. Wight | Michelle Chau

November 2009

Children represent 25 percent of the population. Yet, 41 percent of all children live in low-income families and nearly one in every five live in poor families. Winding up in a low-income or poor family does not happen by chance. There are significant factors related to children's experiences with economic insecurity, such as race/ethnicity and parents' education and employment. This fact sheet describes the demographic, socio-economic, and geographic characteristics of children and their parents – highlighting the important factors that appear to distinguish low-income and poor children from their less disadvantaged counterparts.

National Center for Children in Poverty

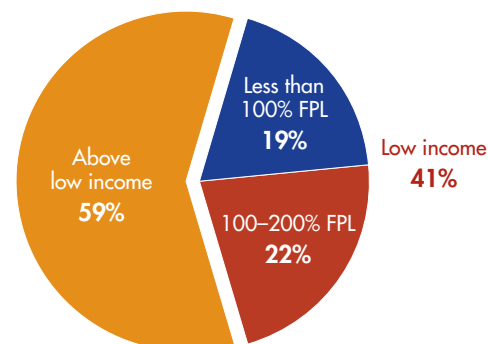

Mailman School of Public Health
Columbia University

How many children under age 18 in the United States live in low-income families?

There are over 73 million children under age 18 in the United States.

- ◆ 41 percent – 29.9 million – live in low-income families.
- ◆ 19 percent – 14 million – live in poor families.

Children by family income, 2008

What is the federal poverty level (FPL) in 2009?¹

- ◆ \$22,050 for a family of four.
- ◆ \$18,310 for a family of three.
- ◆ \$14,570 for a family of two.

Is a poverty-level income enough to support a family?²

Research suggests that, on average, families need an income equal to about two times the federal poverty level to meet their most basic needs.² Families with incomes below this level are referred to as low income:

- ◆ \$44,100 for a family of four.
- ◆ \$36,620 for a family of three.
- ◆ \$29,140 for a family of two.

These dollar amounts approximate the average minimum income families need to make ends meet, but actual expenses vary greatly by locality. For a family of four, the cost of basic family expenses is about \$37,000 per year in El Paso, TX, \$42,000 in Spokane, WA, \$45,000 in Detroit, MI, and \$49,000 in Buffalo, NY.³

Has the percentage of children living in low-income and poor families changed over time?

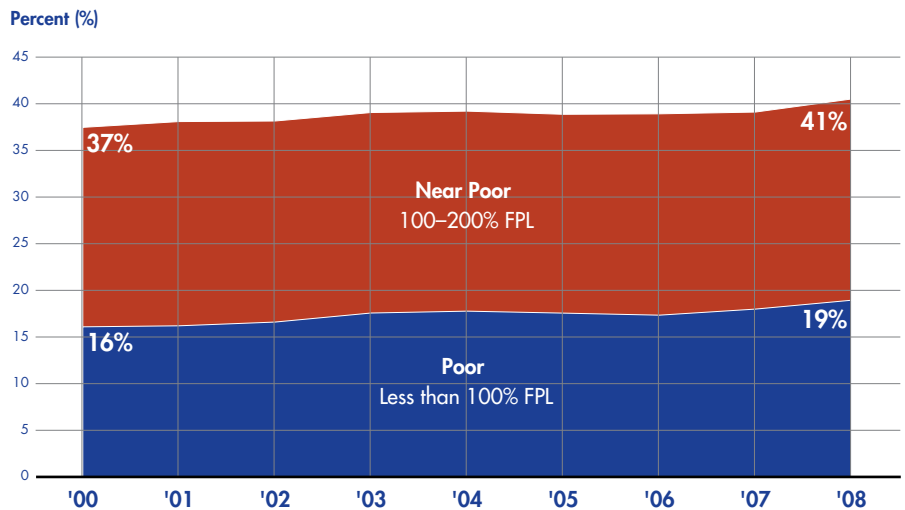

The percentage of children living in low-income families (both poor and near poor) has been *on the rise* – increasing from 37 percent in 2000 to 41 percent in 2008. During this time period, the overall number of children of all ages increased by three percent

while the number who were low-income and poor increased by 12 percent and 21 percent, respectively. This upward trend in low-income and poor children follows on the heels of a decade of decline in the 1990s.

Percentage change of children living in low-income and poor families, 2000–2008

	2000	2008	Percent change
Low income	26,784,244	29,879,325	12%
Poor	11,502,067	13,967,349	21%

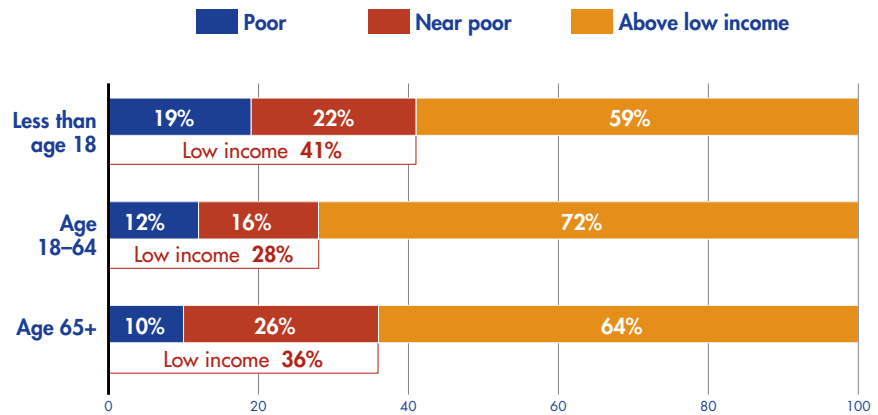

Children living in low-income and poor families, 2000–2008

How do children compare to the rest of the population?

The percentage of all children under age 18 in low-income families surpasses that of adults. In addition, children are nearly twice as likely as adults aged 65 and older to live in poor families.

Percentage low-income and poor by age, 2008

Does the percentage of children in low-income families vary by children's age?

The overall percentages of children living in low-income and poor families masks important variation by age. Young children under age 6 are disproportionately low income. Although they represent 34 percent of the population under age 18, 44 percent of children under age 6 – 11.1 million – live in low-income families and 22 percent of children under age 6 – 5.5 million – live in poor families.

- ◆ 44 percent of children under age 3 – 5.6 million – live in low-income families.
- ◆ 44 percent of children ages 3 through 5 years – 5.4 million – live in low-income families.
- ◆ 41 percent of children ages 6 through 11 years – 9.8 million – live in low-income families.
- ◆ 36 percent of children ages 12 through 17 years – 9.1 million – live in low-income families.

Children living in low-income and poor families by age, 2008

Does the percentage of children in low-income families vary by race/ethnicity?⁴

Although black, American Indian, and Hispanic children are disproportionately low income, whites comprise the largest group of all low-income children under age 18.

- ◆ 27 percent of white children – 11.2 million – live in low-income families.
- ◆ 61 percent of black children – 6.4 million – live in low-income families.
- ◆ 31 percent of Asian children – one million – live in low-income families.
- ◆ 57 percent of American Indian children – 0.3 million – live in low-income families.
- ◆ 42 percent of children of some other race – 0.9 million – live in low-income families.
- ◆ 62 percent of Hispanic children – 10.1 million – live in low-income families.

Percentage distribution of all children and children living in low-income and poor families by race/ethnicity, 2008

Percentage of children in low-income and poor families by race/ethnicity, 2008

Does the percentage of children in low-income families vary by parents' country of birth?⁵

- ◆ 60 percent of children of immigrant parents – 7.7 million – live in low-income families.
- ◆ 37 percent of children of native-born parents – 21.0 million – live in low-income families.

What are the family characteristics of low-income children?

Parents' Education⁶

Higher levels of parents' education decrease the likelihood that a child will live in a low-income or poor family. Yet 40 percent of low-income children and nearly one-third of poor children have a parent with at least some college.

- ◆ 85 percent of children with parents who have less than a high school degree – 7.2 million – live in low-income families.
- ◆ 60 percent of children with parents who have no more than a high school degree – 10.7 million – live in low-income families.
- ◆ 25 percent of children with at least one parent who has some college or more education – 11.9 million – live in low-income families.

Parents' Employment⁷

Although children with a full-time, year-round employed parent comprise more than half of the low-income population, they are less likely to be living in a low-income family compared to children with parents who work part-time/part-year or who are not employed.

- ◆ 28 percent of children with at least one parent who works full-time, year-round – 15.3 million – live in low-income families.
- ◆ 71 percent of children with at least one parent who works part-time or part-year – 8.7 million – live in low-income families.

Children living in low-income and poor families by parents' education, 2008

Children living in low-income and poor families by parents' employment and education, 2008

- ◆ 89 percent of children with no employed parents – 5.9 million – live in low-income families.

Family Structure

Forty-eight percent of children in low-income families – 14.4 million – and 36 percent of children in poor families – five million – live with married parents.

- ◆ 28 percent of all children with married parents – 14.4 million – live in low-income families.
- ◆ 67 percent of all children with a single parent – 15.5 million – live in low-income families.

Does the percentage of children in low-income families vary by where they live?

Region

- ◆ 44 percent of children in the South – 12.2 million – live in low-income families.
- ◆ 41 percent of children in the West – 7.4 million – live in low-income families.
- ◆ 34 percent of children in the Northeast – 4.2 million – live in low-income families.
- ◆ 38 percent of children in the Midwest – 6.1 million – live in low-income families.

Type of Area

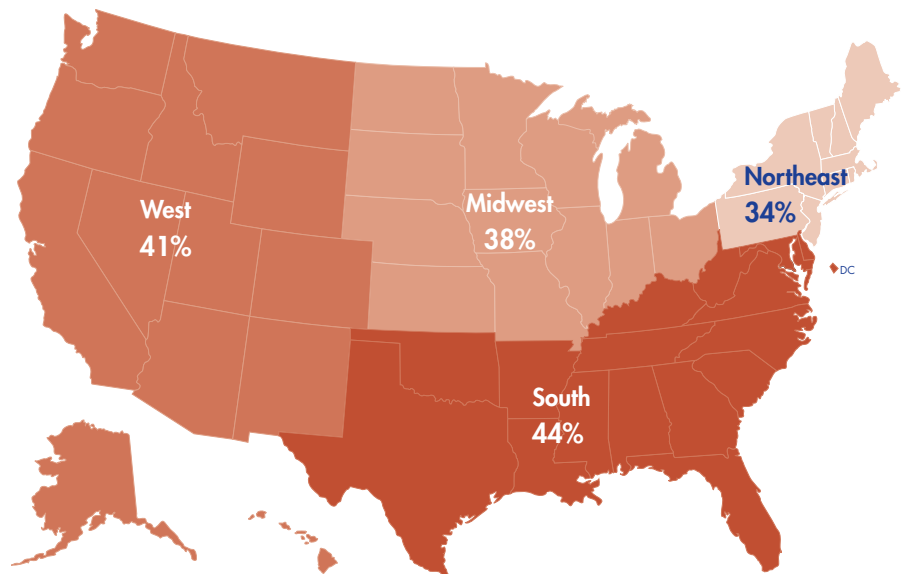

- ◆ 51 percent of children in urban areas – 10.1 million – live in low-income families.
- ◆ 32 percent of children in suburban areas – 10.3 million – live in low-income families.
- ◆ 47 percent of children in rural areas – 5.2 million – live in low-income families.

Residential Instability and Home Ownership

Research suggests that stable housing is important for healthy child development.⁸ Yet, children living in low-income families were two times more likely to have moved in the past year and two times *less* likely to live in families that own a home compared with children living in above low-income families.

- ◆ 19 percent of children in low-income families – 5.7 million – moved in the last year.

Percentage of children living in low-income families by region, 2008

- ◆ 9 percent of children in above low-income families – 3.9 million – moved in the last year.
- ◆ 40 percent of children in low-income families – 12.1 million – live with a family that owns a home.
- ◆ 82 percent of children in above low-income families – 36.0 million – live with a family that owns a home.

Percentage of children living in low-income and above low-income families by residential instability and home ownership, 2008

Are children in low-income families covered by health insurance?⁹

Among all children under age 18, approximately 16 percent in low-income families and 17 percent in poor families are without health insurance coverage. Consistent with research suggesting older children in general are particularly at risk of being uninsured, children ages 12 through 17 in low-income and poor families are more likely to be uninsured compared to younger children in low-income and poor families.¹⁰ Medicaid covers the largest share of low-income and poor children with nearly one-half of low-income children and 63 percent of poor children covered by this public insurance program.

- ◆ 16 percent of children living in low-income families – 4.9 million – are uninsured.
- ◆ 32 percent of children living in low-income families – 9.5 million – are covered by private insurance.
- ◆ 49 percent of children living in low-income families – 14.6 million – are covered by Medicaid.
- ◆ 22 percent of children living in low-income families – 6.5 million – are covered by their state’s Children Health Insurance Program (CHIP).

Endnotes

This fact sheet is part of the National Center for Children in Poverty's demographic fact sheet series and is updated annually. Unless otherwise noted, analysis of the U.S. Current Population Survey, Annual Social and Economic Supplement, March 2009, was conducted by Michelle Chau and Vanessa R. Wight of NCCP. Yumiko Aratani provided feedback that contributed to the analysis. Estimates include children living in households with at least one parent and most children living apart from both parents (for example, children being raised by grandparents). Children living independently, living with a spouse, or in group quarters are excluded from these data. Children ages 14 and under living with only unrelated adults were not included because data on their income status were not available. Among children who do not live with at least one parent, parental characteristics are those of the householder and/or the householder's spouse. Special thanks to Shannon Stagman, Morris Ardoin, Amy Palmisano, and Telly Valdellon.

1. These numbers are from the federal poverty guidelines issued annually by the U.S. Department of Health and Human Services. The demographic findings in this fact sheet were calculated using more complex versions of the federal poverty measure – the thresholds issued by the U.S. Census Bureau. For more information on measuring poverty, see NCCP's state profiles and the U.S. Department of Health and Human Services.

2. Cauthen, Nancy K.; Fass, Sarah. 2008. *Measuring Income and Poverty in the United States*. New York, NY: National Center for Children in Poverty, Columbia University, Mailman School of Public Health.

3. These figures were derived from NCCP's Basic Needs Budget Calculator.

4. In the most recent CPS, parents could report children's race as one or more of the following: "White," "Black," "American Indian or Alaskan Native," or "Asian and/or Hawaiian/Pacific Islander." In a separate question, parents could report whether their children were of Hispanic origin. For the data reported, children whose parent reported their race as White, Black, American Indian or Alaskan Native, or Asian and/or Hawaiian/Pacific Islander and their ethnicity as non-Hispanic are assigned their respective race. Children who were reported to be of more than one race were assigned as Other. Children whose parent identified them as Hispanic were categorized as Hispanic, regardless of their reported race.

5. Low-income infants and toddlers living in households with one immigrant parent and one native-born parent (approximately 0.3 million) are not included in these estimates.

6. Parent's education is the education level of the most highly educated parent living in the household. Parents can either have no high school degree; a high school degree, but no college; or some college or more.

7. Parent's employment is the employment level of the parent in the household who maintained the highest level of employment in the previous year. Parents can either have no employment in the previous year, part-year or part-time employment, or full-time, year-round employment. Part-year or part-time employment is defined as either working less than 50 weeks in the previous year or less than 35 hours per week. Full-time, year-round employment is defined as working at least 50 weeks in the previous year and 35 hours or more per week for more than half the year.
